

LoRa Wireless Air Quality Monitor

Wireless Air Quality Monitor is WINTEC first industrial wireless sensor. Realize the early warning and management of PM2.5 / Multi-gas, and display the air quality status at the local end. If an abnormality occurs, the light will be red and the warning will be triggered immediately. The messages of observation are transmitted back to the data collection center through LoRa network and upload to cloud server, our LoRa network offers a wide range of coverage (urban level), which will meet the requirements of short-term observations and long-term monitoring and analysis. The system is applied a variety places for smart city office building, campus, shopping malls, community, hotel industries. We will be the best partner for System Integrator who is engaged in intelligent city, architecture and building.
